PROFESSIONAL SUMMARY

AI Automation Engineer and AWS Certified Solutions Architect with a focus on designing scalable, intelligence-driven automation ecosystems. Expert in architecting complex n8n workflows, multi-agent AI systems, and high-availability cloud infrastructure. I specialize in bridging the gap between sophisticated AI technologies and practical business operations to eliminate manual bottlenecks and maximize efficiency.

TRAINING & CERTIFICATIONS

- **AWS Solutions Architect Associate:** Gained in-depth knowledge of AWS core services such as EC2, S3, RDS, IAM, and VPC. Learned to design and deploy scalable, highly available, and fault-tolerant systems on AWS.
- **n8n Level 2 Certified:** Built on foundational knowledge to implement advanced workflow automation, including complex data merging, batch processing, API integrations, error handling, and automated reporting with scalable workflows.
- **Automate Tasks with Python:** Learned to automate repetitive tasks using Python, including file handling, data processing, and basic scripting to improve efficiency and reduce manual effort.
- **Backend Development:** Proficient in Node.js, Express, MongoDB and Postgres SQL for building scalable server-side applications and Python for task automation.
- **Google Cloud Cybersecurity Certificate:** Learned to secure cloud environments using Google Cloud technologies. Covered Compute Engine, IAM, Cloud Firewall rules, and best practices in cloud security.

TECHNICAL SKILLS

- **Automation & AI:** n8n, AI Agent Design (RAG), Web Scraping, LLM Integration (Gemini, GPT, Claude)
- **Cloud & Infrastructure:** Amazon Web Services (AWS), Docker, Terraform, CI/CD
- **Programming:** Python, Node.js, JavaScript, Bash scripting
- **Tools & Monitoring:** Grafana, Prometheus, Postman, Linux, Git/GitHub
- **Databases:** PostgreSQL, MongoDB

PROFESSIONAL EXPERIENCE

INTERN/ RECRUIT NEPAL PVT.LTD

Thamel, Kathmandu, Nepal

Associate AI Automation Engineer

April 2026 – Present

- Architecting enterprise-scale multi-agent AI ecosystems, leveraging a 5-agent orchestration model to automate complex inbound inquiry classification and response.
- Developed a centralized Vector Database (RAG) architecture, enabling context-aware AI interactions across multiple platforms with real-time data retrieval from active vacancies.
- Engineering automated resume-parsing and data enrichment pipelines that extract and synchronize candidate information from various document formats into a unified database.
- Designing high-availability automation infrastructure with real-time error-handling webhooks and automated recovery protocols to ensure 24/7 system uptime.
- Leading technical design sessions for cross-platform synchronization workflows, optimizing data flow between web platforms and social media channels.

INTERN/ RECRUIT NEPAL PVT.LTD

Thamel, Kathmandu, Nepal

AI Automation Intern

Jan 2026 – March 2026

- Architected a multi-channel automation ecosystem using n8n, achieving a 90% reduction in manual operations for recruitment and marketing workflows.
- Engineered an AI Auto-Reply Bot using 5 specialized agents and Vector Database (RAG), delivering 99.99% accuracy in automated candidate engagement.

- Developed a global lead generation pipeline that scraped and enriched contact data for 500+ international tech companies, decreasing outreach time by 85%.
- Implemented production-grade reliability features, including real-time error-handling webhooks and automated Slack alerts for 24/7 system monitoring.
- Integrated multimodal AI (Gemini & GPT) for automated branding and social media content creation, synchronized across LinkedIn, Facebook, and Instagram.

ADEX INTERNATIONAL PVT.LTD

Cloud Apprentice

Ekantakuna, Lalitpur, Nepal
July 2025 – August 2025

- Completed an 8-week hands-on AWS Cloud Apprenticeship.
- Worked on real-world AWS services (EC2, S3, RDS, IAM, VPC).
- Received mentorship from industry experts and built scalable cloud solutions.
- Prepared for the AWS Solutions Architect Associate exam through labs and projects.
- Documented cloud deployment steps to help the team work more efficiently
- Standardized cloud deployment documentation to streamline team collaborative efforts.

PRATICAL PROJECTS

- **Enterprise Multi-Agent AI Response Bot (n8n & RAG):** Developed a 5-agent AI system designed to handle diverse inbound email inquiries. Integrated a Vector Database (RAG) to provide context-aware, real-time responses to candidates with 99.99% accuracy, reducing human email management by over 90%.
- **Global Lead Generation & Outreach Pipeline:** Engineered a "Scrape-to-Email" engine that extracted data for over 2,000 tech companies across the USA, UAE, and Nepal. Automated the entire B2B outreach process via SMTP, including validation check for emails, saving the business development team 85% of their manual time.
- **Automated Multimodal Branding & Social Sync:** Built a real-time system that detects new website vacancies and automatically generates branded job graphics using Gemini AI. The workflow synchronizes post creation and publishing across LinkedIn, Facebook, and Instagram simultaneously to maintain a consistent brand presence.
- **Automated Resume Parsing & Database Integration:** Designed a zero-touch pipeline that automatically triggers when a candidate applies via email, extracting data from PDF/Docx resumes and syncing it directly into the candidate database for instant recruitment review.
- **Weekly Automated Job Summary Posting:** Engineered a system that analyzes the week's most popular job categories and automatically generates a "Best Jobs of the Week" summary. It creates custom graphics and captions, then schedules them for cross-platform posting to keep social media audiences engaged.
- **Three-Tier Web Architecture on AWS:** Deployed a scalable and fault-tolerant setup using a custom VPC with public and private subnets across multiple Availability Zones. Implemented high availability by utilizing an Application Load Balancer (ALB) and Auto Scaling Groups (ASG) to handle traffic spikes .
- **Building and Deploying Containers Using AWS ECS:** This project demonstrates the use of Amazon Elastic Container Service to host a simple multi-component web application composed of a website with two supporting API services. The website displays a form where you compose a story with placeholders for nouns, verbs and adjectives.

EDUCATION

TRIBHUVAN UNIVERSITY

Bachelor of Computer Applications (BCA)

Cumulative GPA: 3.40/4.0

Relevant Subjects: Cloud Computing, Database Management, Networking & Security, Software Engineering, Web Development, Operating Systems, Python Programming
